ChiliProject - Bug # 282: Enhance Redmine::SafeAttributes to work for subclasses

Status:	Closed	**Priority:**	Normal
Author:	Gregor Schmidt	**Category:**	
Created:	2011-03-14	**Assignee:**	Eric Davis
Updated:	2011-03-19	**Due date:**	

Remote issue URL:	
Affected version:	
Description:	ChiliProject uses @Redmine::SafeAttributes@ to implement a more flexible version of @attr_protected@. Unfortunately it does not work well with subclasses. It would be great, if @SafeAttributes@ would support that.

Expected behavior would be:

* sub classes have the same safe attributes as their super classes
* sub classes may have their own safe attributes, that are not safe in their super class

Also, while we are at it, I would like to allow the usage of @Symbol@ keys when calling @safe_attributes=@.

Pull Request will be provided immediately.

I'd rather remove @safe_attributes@ completely. See https://www.chiliproject.org/boards/2/topics/68

I've dropped my thoughts there. While that conversation is going on, would you consider this pull request anyway?

IMHO, this ticket could be a candidate for 1.2, removing safe_attributes is more for a major release.

Thanks

Gregor

I did a quick skim of the code, it's looks low impact enough to be in 1.2. I'll merge it into master once I'm able to run all the tests on it (or someone else can merge it if they get a chance).

- Status changed from Ready for review to Closed

Tests passed, merged into master.

One thing to watch in the future: name *new* tests using the Rails @test "description of test"@ style instead of the @def test_description@ style. It's a little thing but over time we want to move over to the new style and take advantage of shared @contexts@ too ([[Code Review]]).

Thanks for merging the changes into 1.2.

Thanks for pointing that out. I'll use the _new style_ next time.

Gregor
