

ChiliProject - Feature # 539: Remove dead code in IssueHelper

Status:	Closed	Priority:	Normal
Author:	Gregor Schmidt	Category:	Journals / History
Created:	2011-07-26	Assignee:	Holger Just
Updated:	2012-01-04	Due date:	

Remote issue URL:

Affected version: 2.0.0

Description: With the aaj-merge, the rather large @IssueHelper#show_detail@ was replaced by @JournalFormatter#render_detail@. However, the original method was kept in place, possibly to keep backwards compatibility. But I guess, it is only there because somebody forgot about it. As far as I can tell, it also uses APIs that were removed with the merge so it is probably not working at the moment.

I propose to remove the method.

Attached is a pull request, which does that.

It also includes a TODO to refactor the test code. I'm currently not aware, where aaj-test-code is kept and therefore was not brave enough to move the code to the right places.

This change breaks compatibility with redmine_code_review which uses show_detail in their app/views/code_review/_reply.html.erb. I can't replace it with render_detail, @journal.render_detail, or @reply.render_detail. I'm creating a related issue in redmine_code_review to have them update, but in case they need help I'm letting you know ahead of time.

Tactical hack: replace show_detail with puts until either a compatibility layer in chiliproject or a change to the plugin fixes this..

Such fix of the plugin is available at https://bitbucket.org/schuhschuh/redmine_code_review.
